The open source program OpenCADD is based on AutoCAD and is written in Java. It supports all CADD and DWG files. It is portable and runs on all major operating systems and architectures. OpenCADD is the choice for CADD automation, CAD drafting and engineering documentation and for data interchange, data interchange via DWG and DXF files and generation of thumbnails. It was founded by Jürgen Wanke and Bastian Rahmberg of the IGIT GmbH company in 2005. Another project is OpenAutoCAD, which is based on AutoCAD. It is developed by the open source community and is written in C++. The software allows users to draw in all editions of AutoCAD and allows editing DWG and DXF files. AutoCAD is also available as a component of Open Source CAD Systems. AutoCAD LT for Linux was developed by Autodesk for the Red Hat Linux operating system. Batch A batch application is a set of commands written to run automatically on a regular schedule. AutoCAD is available as a batch processing system in the MS DOS command-line operating system. The AutoLISP and Visual LISP programming environments also support the use of batch programming. Paul Ryan announced his upcoming retirement from Congress. Ryan, who was originally seen as Mitt Romney's vice presidential running mate, has spent the past several years slowly distancing himself from the 2012 election. He's done well for himself. I have admired Ryan's policy positions over the years, but I don't think anyone could have foreseen that he would become the GOP nominee for vice president.
