Image via AutoCAD is a commercial CAD software application developed by Autodesk and released in December 1982 for the Apple II computer and its successor, the Apple Macintosh. Over the years it has had numerous upgrades and was re-branded to AutoCAD LT in March 1993. As a native graphics application, AutoCAD LT is based on the Apple Macintosh and runs on Microsoft Windows, as well as Apple Macintosh computers. The core concepts, functionality and interface of AutoCAD remain the same as the original AutoCAD release, but features are upgraded and modified for the Windows operating system. AutoCAD (1982) was the first widely available and commercially successful desktop CAD software on the Apple Macintosh and Apple II computers. Developed by Autodesk Inc. and first released in December 1982, AutoCAD was designed to bring CAD workflows to personal computers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps. Similar to the original AutoCAD release, the core concepts, functionality and interface of AutoCAD remain the same as the original release, but features are upgraded and modified for the Windows operating system. The latest release of AutoCAD is AutoCAD 2018. AutoCAD (1982) was the first widely available and commercially successful desktop CAD software on the Apple Macintosh and Apple II computers. It was first introduced in December 1982 as the successor of Apple Computer Inc.'s first widely available computer aided design application, Apple II CAD. Because of its popularity, AutoCAD was the first widely available professional CAD software for personal computers. Core Concept The core concept of AutoCAD is that it is an interactive drawing and design application. Its main function is to help CAD operators draw geometry, animate and manipulate the geometry, and ultimately design and draft products. As a desktop

EDA AutoCAD has three products for electronic design automation (EDA): AutoCAD Electrical (since 1998), AutoCAD LT (since 2001) and AutoCAD Civil 3D (since 2004). EDA uses a number of CAD file formats. A common one is the Cadence EDA format. All of AutoCAD's EDA products, including the latest version, support the Cadence EDA format. EDA products support the following file formats: DXF - which is the file format used in AutoCAD, AutoCAD LT, AutoCAD Architecture and AutoCAD Electrical. DWG - which is a draft standard that became widely used for 3D engineering files. The DWG format is compatible with all DWG-compliant products, and also supports images and AutoCAD-specific graphical elements. ACIS - which is a CAD/CAM format from the Autodesk EDA suite and is similar to the HICAD format that was available in earlier versions of AutoCAD. STEP - which is a standardized binary format used for computer-aided design and manufacture (CAx) models. Autodesk's EDA products also support the following file formats: IGES - A format for 3D models created by 3D-CAD software. SLD - a proprietary format that allows native exchange of parametric 3D data in the form of a parametric surface. STL - a file format that can be viewed and printed, with support for animations, wireframe models, and shared libraries. 3DXML - a binary format in which a 3D model is stored in a 2D ASCII file with custom content such as color, image, and other metadata. AutoCAD Electrical includes integrated automatic layout and verification tools. These allow the designer to create a layout and then have AutoCAD validate the geometry of the design. A 2012 survey in the field of EDA found that the most commonly used EDA design tools included: AutoCAD Electrical - 38% Autodesk ESI Creo - 7% Autodesk ESI Avizo - 8% OpenEMS - 5% Syncad - 4% JTAT - 2% ARACAD 4.6% CATIA V4 - 1% L-CAD - 1% AutoCAD LT supports both 2D and 3D af5dca3d97

The League of Legends Championship Series finals are set to be the biggest in esports history as LoL Esports looks to match up against the juggernaut of the Overwatch League. The semifinals kicked off yesterday with new rivalries and all-star matchups taking shape, and both fans and players are excited for what comes next as these two rosters fight it out to the end. On the minds of fans, many expect this matchup to be one of the best finals to date, but to the competitors, it's all about winning. "There's always a challenge to have to get through, so I'm happy that we have to do this one," LoL Esports analyst Matt "Pollo" Yallop said. "I was expecting us to play AD and C9 or CLG but it's not going to be that easy. I don't think they're going to be able to get past us, especially with them not playing with their own champion. They're just going to look to try and play around other champions. We'll get our chance to showcase what we have in match up situations. "It's not even that big of a challenge for us, we don't need to ramp up our play. I just think that they're going to play around the top lane and try to push it out with people like Zven and Sivir, but that's fine. They can always have a different play style that they can go to, it's just how they feel and they're not going to change their play style at all." CLG goes into their match against the undefeated and reigning champions as a massive underdog, but Yallop doesn't see them as a lost cause. "I think they have some holes to them," he said. "They're not the most mechanically and skill-wise of teams. I think that's definitely their Achilles heel right now. They have to be so good mechanically and [have] very few flaws. I don't think that can be an issue for us, so I don't think they have an issue of winning the match. "What they do have is a really good game plan. When they bring out their composition
