Field of the Invention This invention relates to a fishing lure and more particularly to a fishing lure that may be used as a "hang up" lure or may be used as a drift-producing lure. 2. Description of the Prior Art U.S. Pat. No. 2,998,511 to Henderson discloses a lure-shaped spinner which utilizes a type of wind vane including planer spinner blades that rotate about a central shaft. U.S. Pat. No. 3,952,756 to Moore et al., U.S. Pat. No. 3,962,923 to Kendall and U.S. Pat. No. 4,034,513 to Shafer all disclose the use of spinner blades attached to a central shaft. U.S. Pat. No. 1,528,970 to Fowler discloses a wind vane with several parallel blades attached to a central shaft. In each of these devices, the spinner blades are attached along the central shaft or the wind vane assembly in a manner such that rotating the spinner blades causes the same to swivel which in turn causes the wind vane or central shaft to rotate about the axis. U.S. Pat. No. 4,244,366 to Steinbeck discloses a fishing lure that includes a spinner blade or type of wind vane type of structure for producing a downwardly spiraled drift or suspended lure, while an outwardly spiraled lure may be produced by the movement of the wind vane forwardly. U.S. Pat. No. 4,592,284 to Steinbeck discloses

Bitte versuche es mit einem anderen WLAN-NAS-Gerät (gerade mit USB-Zumengebunden).During conduction of electrical currents with AC (Alternating Current) voltages, direct voltage variations, called DC (Direct Current) offset, occur at the output of an AC/DC converter, which is a circuit for generating output voltages according to the AC input voltage. These variations in the output voltage can be suppressed by using a feed-back circuit of a transformer isolation type. However, this type of DC offset voltage decreases and disappears with the decreasing of the transformer output voltage, which can make it difficult to suppress the DC offset voltages. Patent Document 1 suggests a DC offset voltage suppression circuit that suppresses DC offset voltages by detecting the AC input voltage in the primary side of an isolation transformer, and feedback-controlling the secondary side of the isolation transformer, so as to maintain constant the input impedance of the isolation transformer. This circuit is provided with a feed-back resistor of low resistance, arranged in series with the isolation transformer. The circuit configuration is such that the resistance value of the feed-back resistor is set to a value equal to at most about one-fifth of the transformer secondary winding resistance. Patent Document 2 also suggests a DC offset voltage suppression circuit that has a feed-back circuit arranged in series with a transformer. The Trump administration has reportedly sought to install John Bolton, the former national security adviser under President George W. Bush, as ambassador to the United Nations. Sources have told NBC News that the State Department has decided to proceed with a formal nomination to replace Nikki Haley, the U.S. ambassador to the United Nations. Trump, who has singled out Haley for criticism, has indicated that the pick is near completion. Trump told reporters that he would announce Bolton's nomination "in two or three days" after he gets through a meeting on the nomination to replace U.S. ambassador to the European Union, Kevin Hassett. Haley, who is leaving the Trump administration in early April, announced Sunday that she would be staying on as U.N. ambassador through the end of the year. While 6d1f23a050
