The other is called KOAR save editor v1.6, which seems to be suitable only for armor modding, but since it was originally written in Chinese and then translated into ... Russian, its functions are very similar to those in modding. So I decided not to bother with the translation just to make a review based on my experience with this editor, which I've heard a lot about from my Chinese friends. As elsewhere, in general, the modding process looks like this: 1. Launch the editor: 2. Open the file with the armor modification. 3. Select the "Glue model" tool from the toolbar. 4. Click the "Select armor" button. 5. Select the armor. 6. Press the "Glue" button. 7. That's it!
